CAPE VISIONS

Software to Simplify Complexity

Our Company

Cape Visions is revolutionizing the way people manage their business operations. We provide quality software products to help people understand and manage the complexities in their organization. Our software supports decision making through easy, web-based visualization and simulation technologies.

Our Focus

Our technology helps analyze, design, monitor, manage and optimize workflows. Cape Visions' first major product, Vision Manager, will be released in 2001. Vision Manager is a web-based business intelligence solution that helps management of operational processes and data. It is integrated with workflow systems to collect production statistics, present them in a web-based graphical front end, support extensive operational analysis, and provide a unique environment for forecasting "what if" scenarios in business.

Our Strategy

- Produce unique and targeted solutions that complement existing technologies and result in a more complete solution for the end user.
- Combine data and process analysis and add simulation to bring seemingly disparate approaches together into a single operational management environment.
- Create relationships that provide opportunities to our partners to enhance their offerings while leveraging their professional services, sales channels, and target market expertise.

Our Founders

Robert Shapiro

Robert has 44 years of experience with computer software. He started as a pioneer in the development of modeling and simulation at the University of Chicago; he was also an innovator of compiler technology for IBM and Massachusetts Computer Associates and the founder of Meta Information Applications and Meta Software Corporation. Robert is an active contributor to the Workflow Management Coalition and supporter of the use of international standards in software.

Doug Reynolds

An electrical engineer by education, Doug has over 11 years of experience in process improvement and workflow. He has worked on helping companies in the US, Europe, and South Africa maximize their operational performance. Most recently he was the Director of Business Development for workflow solutions for Meta Software.

Tommy Hansen

Tommy holds a Masters degree in Computers Science from the University of Aarhus, Denmark. He has over 7 years of experience designing and implementing software for process design and analysis. As a senior consultant he has participated in workflow projects at a number of large financial institutions.

Torben Haagh

Torben also has a Masters degree in Computer Science from the University of Aarhus. For over 7 years he has worked extensively with simulation technology, ranging from the implementation of simulators to the use of simulation in cost saving projects at Fortune 500 companies. Torben heads Cape Visions' European office in Denmark.

Henrik Mejlgaard

Henrik holds a degree in Computer Science. He has broad experience in software development in general and is an expert in database application development. Most recently he was the principal architect on a commercial document repository product.
